

## Why Choose Bamboo?

Bamboo is the eco friendly hard wood. It can be harvested 3 times faster than other commonly used hard wood timbers.

Not only is it kinder to our beautiful earth to use bamboo for furniture, it creates a stunning presentation!

Adding Bamboo to your space will a create a statement, of being kinder the earth as well as making it beautiful!

***LETO Bamboo is an Equal Opportunity Employer.***

# Square, Circle or Rectangle

**LETObamboo** is an Australian owned company based in Victoria, with a network of distributors and re-sellers around Australia.

All the bamboo table and chair tops we supply are made to size and finished with an extra hardy UV resistant finish.

Our bamboo is certified by the **Forest Stewardship Council** and complies with the stringent tests applied by the **Living Building Challenge**. Our material is completely non-toxic, and carbon rich. As such, it is extraordinarily strong. Bamboo absorbs much more carbon than a stand of trees of the equivalent area, along with numerous other benefits to humankind and the Earth.

## RANGE OF SIZES, STYLES & THICKENESSES AVAILABLE

### Grain Styles –

- Narrow Grain – Carbonised
- Narrow Grain – Natural
- Strand Woven – Carbonised
- Strand Woven – Natural
- Strand Woven – Multi

#### Circle –

- 250mm – 1200mm

#### Rectangle –

- Length sizes vary between 500mm – 2400mm
- Width sizes vary between 400mm – 1200mm

## ABOUT BAMBOO

### Hardness

Bamboo is harder than traditional hardwood timbers.

The Janka hardness rating chart below provides a comparison between bamboo and a range of timber alternatives.

The Janka hardness test measures the resistance of a sample of wood to denting and wear.

It measures the force required to embed an 11.28mm diameter steel ball halfway into a sample of wood.
